Aimeri Baddouh

Senior Software Engineer · Applied AI & LLMs

Cuenca, Ecuador · Remote · aimeri@baddouh.com · baddouh.com · linkedin.com/in/aimeri-baddouh-a29380360 · github.com/aimerib · huggingface.co/aimeri

SUMMARY

Senior software engineer focused on applied AI: putting LLMs into production, researching what works, and teaching teams to use them well. Builds Claude workflows and Amazon Bedrock integrations at ServicePros, and independently fine-tunes open-weight models and builds datasets, published on Hugging Face. Background in Ruby on Rails, Go, and Rust, after 10+ years in systems administration and DevOps.

EXPERIENCE

Senior Software Engineer, AI
ServicePros Installation Group · May 2025 – Present

- Develop Claude workflows for the team.
- Use Amazon Bedrock to bring LLMs into complex business processes such as contract verification.
- Roll out vendor AI tools that integrate deeply with the company's chat, inventory, and scheduling systems.
- Research and evaluate models and approaches for new use cases, and teach staff to use AI tools well.

Senior Software Engineer
Poll Everywhere · 2023 – 2025

- Designed and led development of presentation streaming solutions built with Playwright, FFmpeg, and Go.
- Modernized code-signing infrastructure and implemented complex geolocation features.
- Mentored junior developers on modern Ruby on Rails patterns and API best practices.

Software Engineer
ServicePros Installation Group · 2019 – 2023

- Led modernization of legacy systems, upgrading legacy code to modern standards.
- Overhauled CI/CD pipelines and established an efficient build and deployment process.
- Integrated third-party services including APM monitoring, Google Maps, and OAuth authentication.

PROJECTS

SpoomplesMaxx open-weight LLMs · huggingface.co/aimeri

- Trained creative-writing LLMs with continued pretraining, SFT, and DPO on Qwen, Gemma, Mistral, Granite, GLM, and Seed-OSS bases; released GGUF and MLX quantizations (top release: 14,000+ downloads).
- Cardmaker: full-parameter fine-tune of Ministral 3 14B on one 96 GB GPU (8-bit AdamW) that turns a one-line prompt into a structured character card; v1 used LoRA on Granite 4.1 8B (Unsloth, TRL).
- Gated releases on multi-turn behavioral test batteries, not loss alone; published targeted training sets repremover-xl (7,281 conversations) and Olivia-Sys (3,886 conversations).

Low-resource language datasets · huggingface.co/aimeri

- Built a Ticuna–Spanish–Portuguese corpus (47K parallel pairs, 48K monolingual rows, tone-annotated lexicon) with leakage-safe splits; consolidated a documented Napo Kichwa–Spanish dataset (13.9K pairs).

Nightrunner · github.com/aimerib/nightrunner-lib

- Text-adventure engine in Rust, compiled to WebAssembly and published on crates.io and npm.

SKILLS

AI & LLMs: Generative AI, LLMs, Claude, Amazon Bedrock, prompt engineering, fine-tuning (full-parameter, LoRA), continued pretraining, SFT, DPO, synthetic data, LLM evaluation, quantization (GGUF, MLX)

ML tooling: Python, PyTorch, Hugging Face Transformers, TRL, PEFT, Unsloth, Axolotl, vLLM, llama.cpp

Software: Ruby on Rails, Go, Rust, TypeScript, JavaScript, React, Elixir, Hotwire, WebAssembly, REST APIs, OAuth

Infrastructure: AWS, Docker, CI/CD, DevOps, systems administration, GPU training on RunPod and Vast.ai

ADDITIONAL

Languages: English, Portuguese (fluent), Spanish · **Military service:** U.S. Navy Reserve, 4 years
